

Scientific Policy Advice

by Christian Kobsda (Leibniz Association)

Scientists have lots of responsibilities: one of them is political consulting.

- But how can you as a scientist when being asked for advice talk to politicians to make sure that they get you right?
- On the other hand, what is a proper way to approach politicians with scientific issues?

In this workshop you will learn how to structure your statements to have a real impact on politicians and policies. In groups, you will face societal challenge and prepare science-based solutions to communicate it to politicians. In addition, you will get insights into debating and reasoning to carry your point. As Christian Kobsda has years of experience in scientific policy advice, you are more than welcome to ask him those questions that keep you awake.
